

REI PRODUCT INFORMATION

PACKS

QUICK TIPS

Select a pack that suits what you do most of the time.

The right size pack depends upon your hiking style: Are you a minimalist or a "gotta have everything along" type? Use our categories as a guide.

Good fit is a must: Let an REI sales specialist help fit you.

BACKPACK BASICS

Backpacks place the majority of your load where it can be efficiently carried: on your hips. Most have suspension systems with padded, contoured shoulder straps, load-lifter straps, a sternum strap and a padded hipbelt.

A majority of today's backpacks use an internal-frame design. (External-frame packs have largely become obsolete, but a few can be found on REI.com.) The body-hugging nature of internal-frame packs enhances balance and freedom of movement. This is ideal for mountaineering, skiing, scrambling and hiking in rough terrain.

We group backpacks from "multiday" to "extended trips" (a week-plus) sizes, and by average volume.

ABOUT CAPACITIES AND WEIGHTS

We measure REI packs and list manufacturer-supplied capacities for other brands. These are "base" volumes: Many packs have collars or other features that allow them to expand. Weights will vary for off-the-shelf versions of the same pack. Looking for a super-lightweight pack? The tradeoff is a slight sacrifice in durability.

VOLUME GUIDELINES

The following are recommendations for

internal-frame pack choices. For packs available in multiple sizes, our charts categorize them according to the regular-size models.

- **2,500–3,000 cubic inches:** A large-volume daypack or ultralight overnighter.
- **3,000–4,500 cubic inches:** Sized right for 3-season weekend adventures.
- **4,500–6,000 cubic inches:** Can accommodate trips of 3 days to a week.
- **6,000+ cubic inches:** Expedition-sized rigs for trips of more than a week; also an option for the "communal packhorse," the one who lugs the shared gear (tent, stove, fuel, filter, etc.) for a group.

If you're a devotee of ultralight hiking, you can easily move down a size category. If you hate to leave anything behind, a mega pack might be tempting. But don't buy too large a pack if you don't really need the space: The pack's own mass adds to your overall load and a more compact model will be easier to balance.

DAYPACK OPTIONS

Technical daypacks: These offer an array of features to hold specialized gear for climbing, skiing and other backcountry uses. Many offer lash-on options for ice axes and other gear.

Classic daypacks: We offer urban daypacks, ideal for students and commuters. Features vary widely among them. A few have padded backs, framesheets, lumbar pads and/or padded hipbelts.

Others: REI also has hydration and water-bottle packs, and child carriers.

FIT: THE MOST IMPORTANT FEATURE

Look closely at torso length and waist/hip size, especially if you're smaller or larger than average. Torso length is measured from your shoulders (at the upper vertebra that protrudes farthest out from your spine) to the top of your hip bone.

Fine tuning: Many packs let you fine-tune

fit via easily adjustable suspension systems. That's a real plus, but some hikers prefer fixed-suspension packs because they are more lightweight than adjustable models.

Women-specific: Today, many packs come in sizes specifically made for women. Features include narrower shoulder straps, shorter torso lengths and smaller hipbelts. These packs can also be worn by men with narrow or slight body frames.

KEY FEATURES

- **Hydration compatible:** These packs have a compartment for your fluid reservoir and often a port or channel for its sip tube.
- **Hipbelts:** Adjustability is key. "Cant" adjustment allows you to align the hipbelt angle with your hipbone shape.
- **Floating top lids:** These and expansion collars extend capacity. Some double as waistpacks for trips away from camp.

BACK-HEALTH TIPS

Always use both shoulder straps and make sure the hipbelt pulls loads in close. Bend knees when lifting your pack. Load heavy items low and near your back, and limit total pack weight to 10%–15% of body weight. If loads will be heavier, get a pack on wheels.

ACCESSORIES

You can expand the capacity of many packs by adding a clip-on accessory pocket, some of which are sized/padded to hold GPS or other gadgets. Stuff sacks and mesh bags help organize small items in big compartments.
